

Project Summary

Clovis Unified School District

Aquatic sports are important to the students and community of Clovis Unified School District in Fresno, California. This is most evident in the district's commitment to providing their athletes with top-of-the-line facilities. When it comes to equipping these facilities, Clovis Unified has continued its long standing partnership with Colorado Time Systems (CTS).

The Clovis Olympic Swim Complex was newly renovated, and features a state-of-the art swimming complex for the brand new Clovis North High School, which is equipped with CTS products. The new facility has been provided with a complete CTS timing, scoring and display system, including a 96 x 160-pixel red LED matrix scoreboard which will entertain and engage spectators with not only event results, but animations as well.

John McGough, Director of Clovis Unified Aquatics, talks about the advantages the matrix board gives them. "This is a nice thing for us! We have never had the capacity before -- now we will be able to do chase starts, run both ends of the pool; and have two 8-lane courses on board at the same time. We'll be able to display heat, lane, time, and place, then come back and import for finals, and put names on the board."
